

Spill Kit Training

Do you have a spill kit? Are you familiar with spill kit contents and their use? Spill kit training provides the knowledge essential to safely and correctly respond to spills in the workplace.

We offer an interactive multimedia training session in a classroom setting. At Akuna Services we offer customised training that is appropriate and critical for anyone who may need to use a spill kit in their workplace. This training will satisfy requirements of Workplace Health and Safety, Environmental Compliance and/or Due Diligence practices of an organisation.

What's Involved

Spill kit training involves three distinct components. Participants can have the chance to be part of a mock spill demonstration. This is of high importance as it ensures the training provided is understood on a practical, not just theoretical level. Therefore, if it comes to the real thing, participants won't be confused or unsure of what to do.

The second component is site specific training. This is implemented to make the training as relevant as possible. It will familiarise participants to the highest level in what they might face in a spill-type scenario.

Finally, training can include quizzes to ensure comprehension of what has been taught.

Spill Kit Training Outcomes

On completion of the course, the participant should understand the basic skills and knowledge necessary to enable them to effectively handle a workplace spill of contaminants, and have a basic understanding of the need for spill control.

At the conclusion of the training you will:

- Have an updated knowledge of spill kits, and how to use them.
- Understand the need for spill control and why it's so important to properly address any spill incidents that may occur.
- Have a firm grasp on the procedures and protocols needed to facilitate an effective response.
- Be able to identify and use the correct spill kit.
- Understand how to appropriately deal with the disposal of contaminated waste

Flexible Training Options

The Spill Kit Training Course has been designed to provide an affordable and flexible solution to reducing your company's risk of a non-compliance. The varying types of training content provide the essential knowledge staff need in order to act appropriately when a spill incident occurs.

Spill Response Training

- Sessions of 60 – 90 minutes
- Spill demonstration included (mock spill)
- Content is customised for the specific site where the training is delivered

Tool Box Talk

- Sessions of 30 minutes

Customised Site Specific Training

- Tailored to meet your environmental compliance requirements.

Any workplace at risk for a spill requires employees to take part in this training. Ensure your compliance by undertaking spill kit training today.
